Dear Colleagues,

The Canadian Museum of Nature is the Canadian Focal Point for the Global Taxonomy Initiative. From time to time we receive publications from the very active Belgian National Focal Point to the GTI in a series called ABC Taxa. The most recent book is entitled, *Guía taxonómica de los anfibios de Cuba* (ABC Taxa volume 4, 294 pages). This impressive work by L. M. Díaz and A. Cádiz is written in Spanish, has distribution maps, excellent colour and b/w images of adults and developmental stages, taxonomic keys, and a CD with vocalizations of many of the frog species. If you wish to have a copy you should contact Dr. Yves Samyn at abctaxa@naturalsciences.be

Best of the season to all.

Mark.
